

How to Upload a Reset Schedule

Chainlink Analytics User Guide

The Reset Schedule tells your sales team when and where to reset product displays at each store. This guide walks you through downloading the template, filling in your schedule, and uploading it so your team can see their assignments.

Before You Start

You will need:

- The store numbers for the chain you are scheduling
- The reset date for each store (format: MM/DD/YYYY)
- The reset time for each store (format: 8:00 AM or 13:00)

Step-by-Step Instructions

Step 1 — Navigate to Reset Schedule

- Log into Chainlink Analytics
- Click Format & Upload in the left navigation menu
- Select Reset Schedule from the tabs at the top

Step 2 — Download the Template

- Click Reset Schedule Template to download the Excel template
- The template has 3 columns: STORE_NUMBER, RESET_DATE, RESET_TIME
- Do not add, remove, or rename any columns

Step 3 — Fill In Your Schedule

- Enter the store number for each reset location
- Enter the reset date in MM/DD/YYYY format (e.g. 08/15/2026)
- Enter the reset time (e.g. 8:00 AM, 1:00 PM, or 13:00)
- One row per store — do not combine multiple stores on one row
- Save the file when done

■ Store name, address, city, and county are filled in automatically by Chainlink — you do not need to enter these.

Step 4 — Select Your Chain and Upload

- In Chainlink, select your chain from the dropdown

- Click Choose File and select your completed Excel file
- Click Upload Reset Schedule
- Chainlink will verify your store numbers and confirm the upload

■ *If store numbers don't match the selected chain, Chainlink will stop the upload and let you know which chain the stores belong to.*

Step 5 — Verify Your Schedule

- Your team can now see their reset assignments in the app
- If any stores are missing, confirm the store number exists for the selected chain in the system
- Contact your Chainlink administrator if you need to make corrections

Need Help?
